MATH GRAD SEMINAR

Introduction to \mathcal{A} -Fibered Biset Functors

İbrahim Kaan Aslan
Boğaziçi University

Abstract:

In representation theory, it is natural to consider groups acting on sets. In this talk, we will be interested in two ways of actions of two groups on a set and we will relate these actions to the functors called biset functors and \mathcal{A} -fibered biset functors. If time permits, we will give a parametrization for such functors.
